Art Unit: 2877

1. The following is an examiner's statement of reasons for allowance:
2. The art does not show or suggest the combination claimed; in particular the art does not show or suggest the at least one fan positioned within the claimed enclosure, said fan causing a portion of a gas contained within said enclosure to circulate in laminar flow following a path substantially along interior wall surfaces of said enclosure, whereby said flowing gas makes thermal contact with a claimed heat exchanger, wherein there is a heat pump in thermal contact with the heat exchanger, with an optical cavity of a cavity enhanced optical spectroscopy system being within the housing but not being situated within said flow path.
3. Hancock et al (US 2004/0211905) briefly mentions, that in a cavity enhanced absorption apparatus that temperature control of the optical cavity may be required (page 2, paragraph [0034], lines 7-9 of that paragraph). Owen et al (US 6,486,474) teaches temperature control of a sample cell (column 10, lines 35-45). Holen et al discloses that temperature in a housing may be "suitably maintained at a selected level by means of one or more conventional electric coil heaters, fans, temperature sensors, and a temperature control circuit in a manner well known to persons skilled in the art" (in the paragraph beginning on column 8, line 56). Bragg et al (US 4,749,276) shows a long path absorption cell with a heating jacket and mirror heaters which allows the cell to be operated at elevated temperatures (column 5, lines 27-30). Stalder et al (US 3,860,818) shows a system with heating elements to alleviate the effects of temperature change (see the paragraph beginning on column 16, lines 46), and teaches a temperature sensor (a thermistor).

Art Unit: 2877

While the references above show the general knowledge in the art of the benefits of temperature control in optical absorption measuring instruments, none of the references disclose or suggest the claimed combination as discussed above. Although Holen et al (mentioned above), does broadly teach that any fans be mounted in such a way as to avoid directly circulating air across the optics (column 9, lines 11-17), that reference does not describe a system as claimed with fans directing laminar flow substantially along interior walls of an enclosure in the claimed combination with the other claimed elements.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Richard A Rosenberger whose telephone number is (571) 272-2428. The examiner can normally be reached on Monday through Friday during the hours of 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gregory J. Toatley, Jr. can be reached on (571) 272-2800 ext. 77. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
